Company profile

Our company was established in 2008, since the first law regarding renewable energy resources came into force in our region.

Our aim is to provide green solutions for our customers, whether they are in the private, public or government sector. We are dedicated to provide customized solutions for all of our customers as maintenance free and as reliable as possible according to their requirements.

We are committed to this vision and to meet it, we had to go one step further than the others. Even before our company was established, we gathered people that were passionate about this vision and begun testing all the possible manufacturers of solar components. After two years of thorough research and testing we came up with products such as on-grid, off-grid or fuel save systems that can withstand even the harshest environment whether they are exposed to snow, sand or high winds. Now we provide these solutions all across the globe and our presence is commonly requested by customers, which needs weren't met by our competitors.

In 2008 our company began installing photovoltaic systems in Slovakia. With our remarkable complete solutions we were able to become the strongest company in the Slovak market in no time, solely by the Internet marketing and the word of mouth.

Our pursuit for perfection has not been unnoticed, our director Ing. Dušan Sirotko was approached by the Deputy Prime Minister for investment to become his advisor regarding renewable energy in 2012.

In 2011 we installed complete off-grid solutions in Kenya for several villages and schools, since then our company installed customized solutions in several countries such as Germany, Czech Republic, Somalia, Kenya, etc.

...it isn't just work, but joy, a hobby and strong passion altogether!

Dipl.-Ing. Dušan Sirotko, CEO
